

# Transit Scheduling Tool

---

Raymund Paolo Abad  
University Researcher, STARPLAN VI

# MOTIVATION

## COMFORT

- Vehicles are fitted with comfortable seats. There is sufficient number of seats available.

## ACCESSIBLE

- Available in every community for all segments of society.
- Designation of stops, pick-up and drop-off points.

## RELIABLE

- Predictable in terms of travel and waiting time and schedule.
- Fixed dispatch time and short intervals between vehicles.

## ENVIRONMENTALLY SOUND

- Vehicles have low emissions

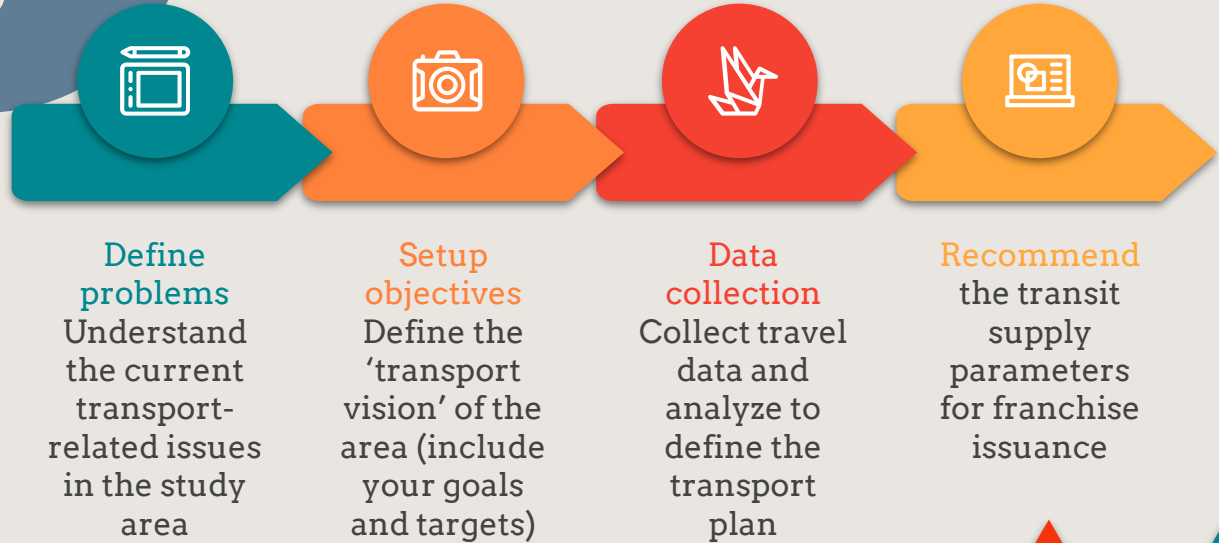

## SAFETY

- Monitoring through cameras and GPS

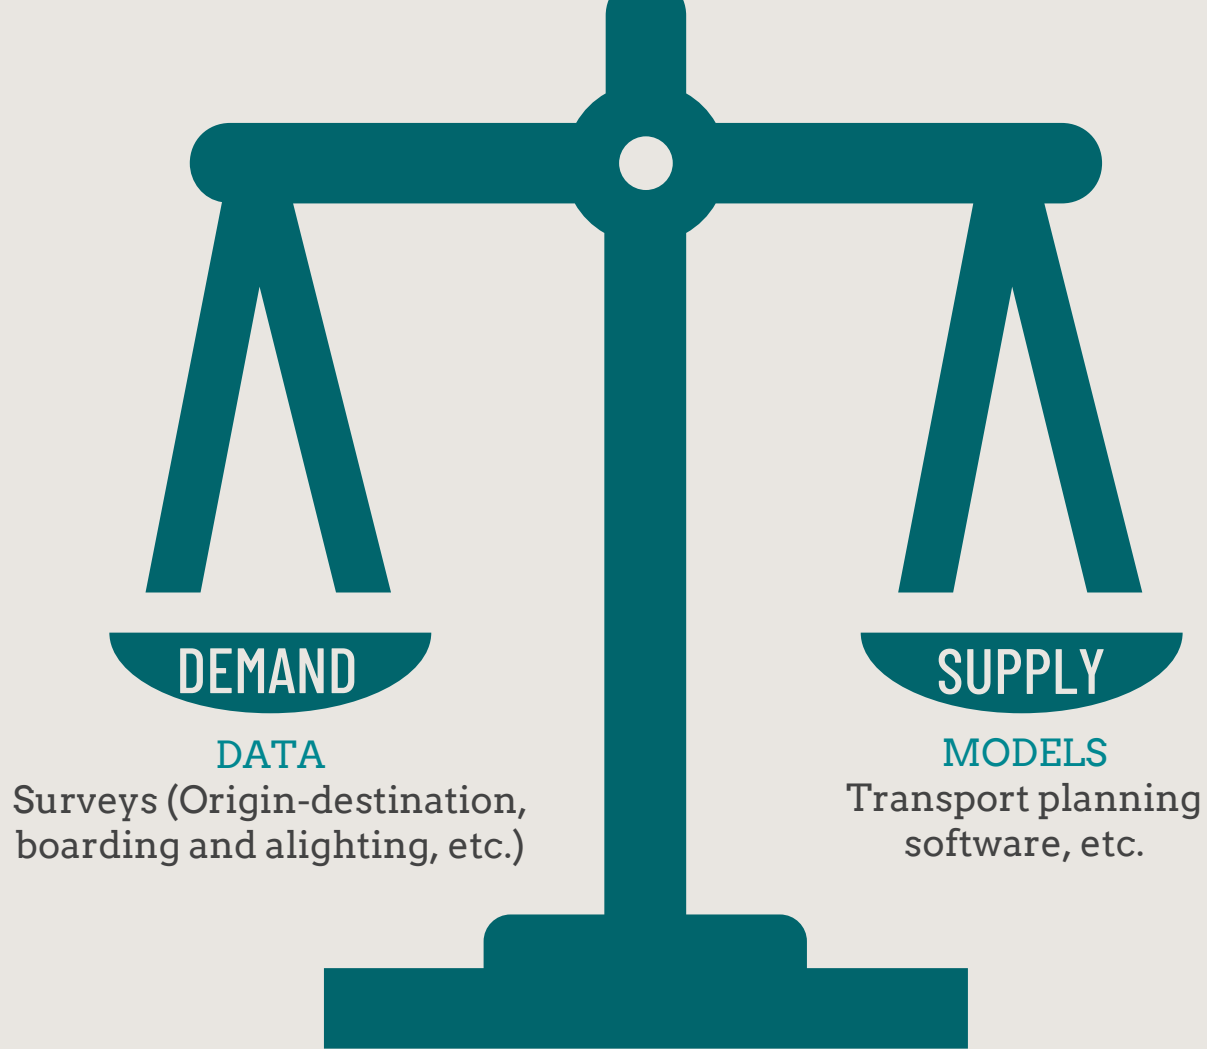

## Transit route planning process:

How can we make transport reliable?

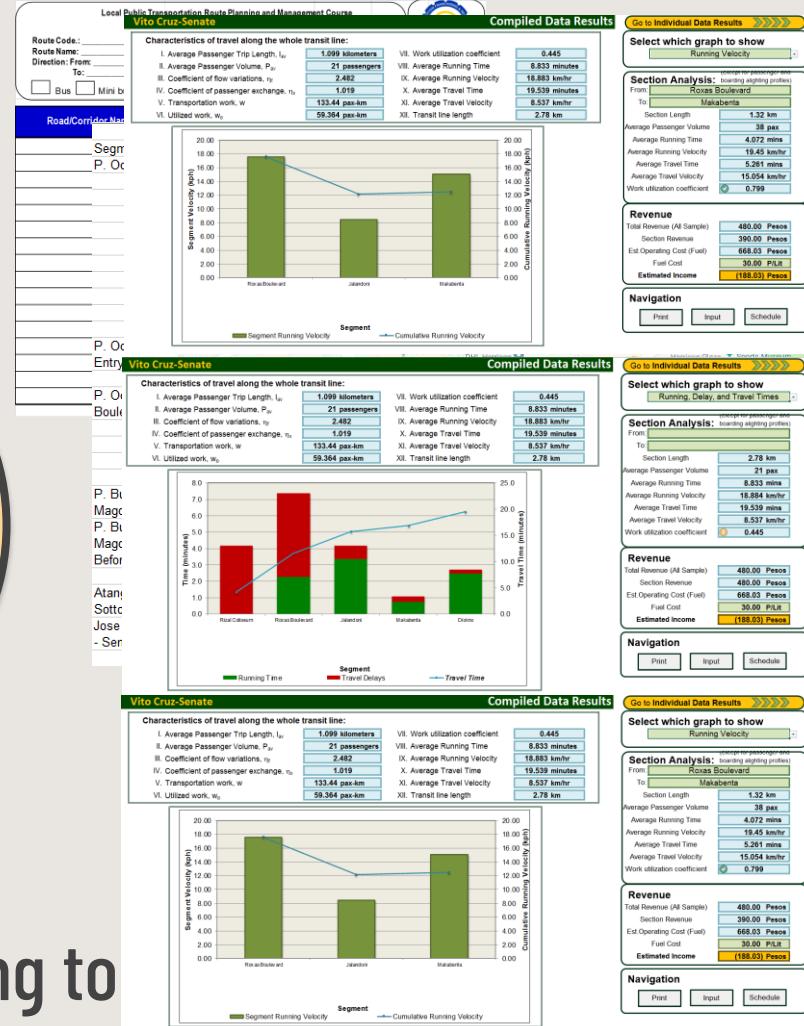

Passenger  
movement  
information

Travel time  
information

Transit  
performance and  
scheduling  
recommendations

Transit scheduling to

Alighting

# Who can use this?

**Academe**  
Research of  
transit  
performance

**Government**  
Planning (for  
LPTRP) and  
service  
evaluation

**Operators**  
Understanding  
travel demand and  
adjustment of  
operations  
(schedule)

# Current features

01

## Spreadsheets software-based

The tool was developed using a spreadsheet software which allows transferability

02

## Individual and aggregated transit analysis

Allows analysis of transit services at a route and individual bus level

03

## Revenue calculation

Estimates revenue of services (surveyed only)

04

## Timetabling

Timetabling of operations from collected data using clock headways

# Under development

## **Stop selection**

Select a stop from a pre-defined list to reduce user input

## **Crew/fleet scheduling**

Schedule crew schedule for proper allocation

## **Integration with transport technologies**

Integrate with developed APCs for automated analysis

## **LPTRP compliance**

Addition of formulas to comply with LPTRP standards (route measured capacity)
